## INVESTMENT OBJECTIVES

Signature CIO Islamic – Growth Fund Open Ended IC Plc (the “Fund”) is an actively managed Shari'a compliant fund that aims to achieve growth mainly through capital appreciation over a mid to long-term investment horizon by investing in a diversified portfolio of Shari'a compliant opportunities across multiple asset classes. The Fund will typically access markets through direct security exposure, but it may gain exposure to certain markets and assets through Shari'a compliant collective investment schemes for efficient portfolio management purposes. The Fund will only invest in securities that comply with the principles of Shari'a.

## FUND COMMENTARY

The CIO Islamic Growth Fund recorded a -6.90% performance during the month, reflecting a challenging macro environment characterized by rising geopolitical tensions, elevated oil prices, and tightening global financial conditions. These factors contributed to upward pressure on U.S. Treasury yields, weakness in global equity markets, and a broader risk-off sentiment across asset classes.

During the month, the portfolio remained well-diversified across asset classes, with equities forming the largest allocation at 72.1%, followed by fixed income at 15.9%, gold at 7.1%, and cash at 4.9%. This positioning reflects a pro-growth stance, while maintaining diversification through defensive assets such as fixed income and gold to help navigate market volatility. The fixed income portfolio offers a yield-to-maturity of ~6.9%–7.0%, duration of ~6.9 years, and a weighted average rating of BBB. On the equity side, the portfolio remains focused on large-cap global companies, with a weighted average market capitalization of approximately USD 1.30 trillion. The allocation continues to emphasize quality growth characteristics, reflected in a dividend yield of 1.19% and a price-to-earnings ratio of 21.0x.

On the fixed income side, the portfolio continues to maintain a balanced and diversified structure across duration, geographies, and credit quality. Duration is distributed across three key buckets, with approximately 57% allocated to short-duration instruments (1–5 years), 11% in the intermediate segment (5–10 years), and 32% in long-duration securities (10+ years). This barbell-like positioning supports carry generation while retaining exposure to duration-driven returns. Geographically, the fixed income portfolio is well-diversified, with GCC exposures accounting for around 59%, primarily in the UAE (~28%), Saudi Arabia (~26%), and Kuwait (~5%). The remaining 41% is allocated to non-GCC markets, with Indonesia (~12%), Malaysia (~11%), and Turkey (~15%) representing the largest exposures. From a sectoral perspective, the portfolio remains balanced across sovereigns (~28%), real estate (~21%), and banks (~12%), complemented by utilities, energy-related credits, and select corporates. In terms of credit quality, the portfolio maintains a tilt toward higher-quality issuers, with approximately 58% allocated to investment-grade credits (BBB- and above), 35% to high-yield credits (BB- to BB+), and around 7% to single-B+ issuers. On the equity side, sectoral exposure is concentrated in high-growth and innovation-driven industries, with semiconductors (21.3% of the equity portfolio), internet (11.7%), software (11.4%), pharmaceuticals (9.4%), and computers (9.1%) representing the largest allocations. Geographically, the equity portfolio is predominantly allocated to the United States, accounting for approximately 75.8% of the equity exposure, complemented by Canada (4.4%), Taiwan (3.0%), China (2.7%), Japan (2.3%), the UK (2.3%), and Australia (1.4%).

Corporate sukuk and sovereign exposures came under pressure during the month amid a sharp rise in geopolitical risk driven by the escalation of the U.S.–Iran conflict. Concerns around potential disruptions in the Strait of Hormuz led to a material increase in regional risk premia and a broad widening in sovereign CDS across key sukuk markets. CDS spreads widened meaningfully, with Turkey increasing by around 70bps, Dubai by ~37bps, Qatar by ~21bps, and Abu Dhabi by ~18bps, alongside continued widening in Indonesia (~17bps) and Malaysia (~6bps). While GCC markets primarily reflected direct geopolitical repricing, the widening in Indonesia and Malaysia was more closely linked to rising oil-led inflation expectations and external vulnerability concerns. The broader sukuk universe also experienced significant pressure, with G-spreads widening across both sovereign and corporate segments. Within this, the UAE real estate sector saw pronounced dispersion at the issuer level, reflecting differences in leverage, funding visibility, and overall credit quality. More leveraged names such as Binghatti experienced some of the sharpest repricing, with spreads widening to around the mid-800bps range, highlighting heightened sensitivity to tighter financial conditions and risk-off sentiment. The portfolio has no exposure to Binghatti, which helped avoid the most severe dislocations within the lower-quality segment. Within the lower-rated real estate segment, the portfolio's exposure to names that experienced sharper repricing (500-600bps) remained relatively limited. In contrast, the largest exposure within the high-yield real estate segment was ARADA (5.0%), where spread widening was comparatively more contained at,

Source: Aditum Investment Management Limited

around 400bps, supported by stronger fundamentals and perceived government backing. This was complemented by exposure to DAMAC (4.4%), where spreads widened by around 300bps, remaining relatively more resilient compared to more stressed names. Beyond the UAE, the portfolio also maintained exposure to Saudi real estate through ARACEN (2.4%), where spread widening was more limited at approximately 190bps, providing a degree of stability within the allocation. In the investment-grade segment, the portfolio holds ALDAR (3.3%), where spread widening remained minimal at around 40bps, further supporting the overall resilience of the real estate sleeve.

Fixed income contributed -0.90% during the month, with weakness driven by both duration and credit. At a sector level, real estate was the largest drag (-204bps), followed by sovereigns (-119bps), while banks (-33bps) remained relatively more resilient compared to other risk-sensitive sectors. Investment companies (-22bps) and commercial services (-21bps) also detracted, with other sectors such as oil & gas, telecommunications, and diversified financials seeing more modest declines. Geographically, the UAE (-228bps) was the primary driver of underperformance, followed by Saudi Arabia (-106bps), while Indonesia (-56bps), Turkey (-49bps), and Malaysia (-43bps) also contributed negatively. At the security level, the main detractors included UAE high-yield real estate names with performance largely driven by spread widening and risk-off sentiment rather than any material deterioration in fundamentals. Sovereign exposures in Indonesia and Malaysia also weighed on returns due to rising U.S. Treasury yields, while more defensive segments such as utilities, banks, and select sovereigns demonstrated relative resilience.

Gold contributed -0.73% during the month, reflecting a sharp correction of approximately -11.9%. The decline was driven by a combination of rising U.S. Treasury yields, a stronger U.S. dollar, and profit-taking following the strong rally in preceding months, as higher real yields reduced the appeal of non-yielding assets.

Equities were the primary driver of weakness, contributing -5.15% during the month, reflecting broad-based risk-off sentiment amid heightened geopolitical uncertainty and tighter financial conditions. Sectorally, Technology (-1.76%) and Consumer Non-Cyclicals (-1.01%) were the largest detractors, followed by Communications (-76bps), Industrial (-71bps), Basic Materials (-59bps), and Consumer Cyclical (-52bps), while Energy (+22bps) was the only sector to contribute positively. At the stock level, the largest detractors included Alphabet (-37bps), Microsoft (-29bps), Meta Platforms (-23bps), Samsung Electronics (-22bps), and Taiwan Semiconductor (-21bps), reflecting broad-based weakness in global technology. On the positive side, Suncor Energy (+8bps), CF Industries (+4bps), Exxon Mobil (+4bps), and PetroChina (+3bps) provided a partial offset. Regionally, the U.S. (-3.25%) was the primary drag, followed by Canada (-27bps), Taiwan (-25bps), Korea (-22bps), and Japan (-26bps), while other regions contributed marginally.

During the month, the Fund actively repositioned to capitalize on market dislocations and widening spreads, selectively increasing exposure to UAE real estate names, at more attractive entry levels. This reflects the view that recent spread widening has been largely technical and liquidity-driven rather than fundamentally driven.

The portfolio is also positioned to benefit from recent price corrections across select issuers where fundamentals remain intact, with weakness largely driven by systemic factors rather than issuer-specific developments. The investment team continues to monitor the macro backdrop alongside individual credits, maintaining exposure where dislocations are market-driven while remaining disciplined on risk management. The portfolio retains a high-quality bias, complemented by selective exposure to higher-yielding credits identified through bottom-up analysis. The strategy continues to emphasize selective deployment into fundamentally strong issuers offering elevated carry, while maintaining discipline on credit quality, liquidity, and overall portfolio risk. From a rates perspective, the longer-duration sleeve provides upside in a more supportive yield environment, while shorter-duration exposures continue to provide carry and help manage interest rate risk. Overall, the portfolio remains well positioned to benefit from a gradual normalization in spreads and a more stable macro backdrop over the medium term.

Fixed Income & Equities Investment Team, Aditum Investment Management Limited

## RISK AND REWARD PROFILE

The risk and reward indicator illustrates where the Fund is positioned in terms of its possible risks relative to its potential rewards. The higher the Fund's position on this scale, the greater the possible reward, but also the greater risk of losing money. This risk indicator is calculated using historical data, which cannot be used as a prediction for the future. Therefore, the risk classification may change over time. Even if the Fund is in the lowest risk class you can lose money, as no investments are entirely risk free.

## RISK CONSIDERATIONS

The Fund invests mainly in Shari'a compliant securities and funds globally across a variety of asset classes that may include equities, Sukuk, liquid alternatives (through Shari'a compliant exchange traded funds) and cash. Equity securities fluctuate in value based on changes in a company's/fund's financial condition, general market and economic environments and market conditions, resulting in an increased potential for volatility. The Sukuk market due to its size may create low levels of liquidity. The Fund's investment positions may furthermore be leveraged by entering into Shari'a compliant financing arrangements. The Fund will therefore be subject to credit and liquidity risks. At this time, the level of the risk and reward profile is equal to 4 as the performance can be subject to relatively moderate fluctuations. For full details of the risks the Fund may be exposed to, please refer to the Fund's Prospectus.
